## **Universal Electric Corporation Awarded Pittsburgh Technology Council Tech 50 Advanced Manufacturing Award**

Universal Electric Corporation (UEC) is pleased to announce that the company was awarded the prestigious Tech 50 award from the 2009 Pittsburgh Technology Council in the Advanced Manufacturing category.

Securing the award, UEC proved that the company has been a model for success and innovation. UEC is the manufacturer of STARLINE Track Busway and STARLINE Plug-In Raceway – both products are electrical distribution systems that give you the ability to change or add to floor plans quickly and easily – *without any down time!*

UEC's products reach across a number of applications, including data centers, laboratories, industrial, retail and advanced manufacturing. The installation of a STARLINE system can be completed in a fraction of the time it takes to install more traditional power distribution systems and with a very low cost of ownership. And, the product can be disassembled and reused at new locations with no additional installation or labor costs – making STARLINE a very sustainable product in a green build environment.

According to the Pittsburgh Technology Council, the product's most important feature is the ability for customers to monitor the amount of current used to help with energy savings and reliability.

Congratulations, Universal Electric Corporation for receiving the Pittsburgh Technology Council Tech 50 Advanced Manufacturing Award for 2009!
